SKILLS

Programming Language

Javascript, Python, Typescript, CSS, Bash, SQL, PHP

Framework

Vue.js, Express.js, React, Lit, Solid.js, Angular, Ionic, Laravel, Django, Electron

Database

MongoDB, SQLite, MySQL, Redis, Postgres

Tool

Git, Gemini, Klaviyo, Jest, ESLint, PyTest, Cypress, Pandas, Playwright, Stripe, PyTorch

Infrastructure

Docker, Nginx, Github, Github Actions, Azure DevOps, AWS

EDUCATION

MSc — Computer Systems and Networks

Warsaw University of Technology | 2023 — 2025

Thesis on Spectrum Sensing using Cognitive Radio (5/5). GPA: 4.55/5.

BSc — Software Engineering

Windesheim Flevoland | 2016 — 2020

HBO-ICT with a minor in entrepreneurship.

CERTIFICATIONS

AWS Certified Developer - Associate	2026
Cambridge English: C1	2016
AWS Cloud Practitioner	2021
Certified Scrum Master	2022

LANGUAGES

Dutch	C2
-------	----

SUMMARY

Full-stack engineer with nearly a decade of experience across diverse domains. I have experience in enterprise environments within government organisations and enterprise level organisations as well as smaller companies. I have extensive experience with JavaScript/TypeScript, Node.js, Python and PHP. Within these languages I have worked on the frontend with Angular, React, Vue and Solid.js. On the backend I have experience with Laravel, Django, NestJS, Express.js and FastAPI. I am also familiar with cloud infrastructure on AWS and Azure, CI/CD pipelines, and data engineering with SQL and Pandas. I hold the AWS Certified Developer - Associate certification. I value code quality and work with unit testing frameworks such as Jest, Pytest and Vitest, with extensive experience running them alongside Cypress. Outside of work I deepen my knowledge of various IT topics such as hashing, encryption, networking, etc. See my GitHub for more details. I also write blogs, readable on my website.

EXPERIENCE

Lab Digital

Oct 2026 — Present

Senior Full Stack Engineer | GraphQL · node.js · Typescript · Next.js · AWS

As a senior full stack engineer at Lab Digital I work on various projects for Lab Digital's customers.

I use GraphQL, Node.js, TypeScript, Next.js and AWS to build these projects. Within this role I am responsible for the technical development of these customer projects and how they are implemented.

Mikrocloud

Jul 2025 — Oct 2026

Lead Full Stack Developer | Laravel · Nuxt.js · AWS · MySQL · Mikrotik RouterOS · PHP · Stripe · Docker

As the lead developer at Mikrocloud I was responsible for the technical decisions and infrastructure of an SD-WAN platform that helps users manage Mikrotik RouterOS devices.

The backend was built with Laravel on AWS Lambda (via Laravel Vapor) using a microservices architecture with SQS for inter-service communication, and the frontend with Nuxt.js.

I also wrote scripts in the RouterOS scripting language to configure routers remotely.

Within this role I was responsible for the technical development of the platform, its architecture and infrastructure.

WISEPIM

Oct 2024 — Oct 2026

Full Stack Developer | Next.js · Django

As a full stack developer at WISEPIM I worked on both the frontend and the backend of their PIM.

WISEPIM is an AI company that improves product data. The PIM enriches catalogs so products are easier to find, search, and sell, and publishes that content to shops and marketplaces.

The platform was built with Next.js and Django.

Within this role I was responsible for the technical development of the frontend and the backend and how they were implemented.

Webshopimporter

Sep 2024 — Oct 2026

Lead Full Stack Developer | PHP · Laravel · MySQL · Docker · Linux

As the lead developer at Webshopimporter I managed the entire application that synchronises supplier data to different e-commerce platforms. The platform uses CodeIgniter and Laravel. I also managed the hosting on a Linux server with Docker. A large part of the work was complex data mapping. Supplier data arrived in many different structures, and I had to map those large datasets onto the product models of the e-commerce platforms so the catalogues stayed in sync. Within this role I made the architectural decisions for the application and was responsible for how those mappings and the rest of the platform were implemented.

Swiftsync

Sep 2024 — Oct 2026

Full Stack Developer | Django · NiceGUI · Playwright · Pandas · CCVShop · Wordpress

As a full-stack developer at Swiftsync I worked on various software solutions based on client requirements. I used various frameworks, including Django, NiceGUI, Playwright, Pandas, Gemini's API and more. I built a data management dashboard in NiceGUI that provides an easier interface for managing CCVShop product data, and a web scraping dashboard using Django and Playwright for highly configurable data extraction from websites. I also developed a product synchronisation tool between Wintree, a management system in the Dutch horticultural industry, and various e-commerce platforms, handling not only product data but also stock levels, customer groups and tier pricing. Within this role I was responsible for the technical development of these tools and how they were implemented.

Chary Solutions

Jul 2024 — Oct 2026

Senior Developer | Javascript · Klaviyo · Gemini · Lightspeed · Shopify · WooCommerce · CCVShop

As the senior developer at Chary Solutions I handled the technical development of marketing integrations between various platforms that are not supported by Klaviyo out of the box. I used Google Tag Manager for custom tracking cookies for actions on websites and used the APIs of various companies to collect the required data and integrate it into Klaviyo. I also built internal automations, scripts and tools that streamline business processes and reduce manual work for the marketing team, including integrating Gemini's API to automatically categorise data. Within this role I was responsible for the technical development of these integrations and internal automations and how they were implemented.

SPAR

Jun 2024 — Dec 2024

Data Engineer | Python · Pandas · SQL · Azure DevOps · PySpark

As a data engineer at SPAR Nederland I worked on data challenges for one of the Netherlands' largest retail chains, with a focus on parsing and mapping big data as efficiently as possible. I used Azure Data Factory, Azure Databricks and Azure SQL Database to manage and process large datasets. I used Pandas to efficiently shape data into the right form, and PySpark to split workloads into batches across multiple instances. Within this role I was responsible for the technical development of these data challenges and how they were implemented as a team member. For this I had to use my skills for working with big data and my knowledge of Azure's data services to solve the complex problems SPAR faced.

ING

Apr 2022 — Sep 2023

Full Stack Developer / Product Owner | Lit · Javascript · Typescript · Jest · Azure DevOps · ESLint

As a full-stack developer and product owner at ING I worked on banking interfaces built with Lit web components, focusing on code quality by writing custom ESLint rules enforced across the team and driving unit testing standards with Jest.

I managed Azure DevOps CI/CD pipelines for reliable deployments.

In my role as developer I used frameworks such as Lit, Node.js, ESLint and Azure DevOps to build the banking interfaces and manage the CI/CD pipelines.

In my role as product owner I focused on setting realistic expectations and preventing stakeholder misalignment.

What the team said they could handle was what got planned, not more.

This approach meant we made every deadline and kept both the team and stakeholders aligned throughout the project.

Within this role I was responsible for the technical development of these banking interfaces and how they were implemented as a team member.

SVB

Apr 2021 — Apr 2022

Frontend Developer | Angular · Javascript · Jenkins · Cypress

As a frontend developer at SVB (Sociale Verzekeringsbank), a major Dutch government agency, I worked on a platform that translated raw data into an advanced frontend dashboard, as a translation layer between the legacy application and the new frontend.

I used AngularJS for the legacy application and Angular for the new frontend, Jasmine for testing the code, and also worked with Jenkins for CI/CD pipelines.

Within this role I was responsible for the technical development of this frontend and how it was implemented as a team member.

Quintor

Oct 2020 — Oct 2023

IT Consultant | Javascript · Azure DevOps · node.js · Angular · React · Vue.js

At Quintor, an IT consultancy, I started with a traineeship and later became an IT Consultant. Over my three years here, I completed assignments at SVB and ING. During my time at the company, I learned a lot from more experienced consultants about high code quality, development pipelines, and deep testing strategies. I also shared my own knowledge by giving knowledge sessions.

The role focused on working in a framework-agnostic manner, teaching me to quickly adapt to different technologies and understand the entire application stack.

MedWeb

Sep 2019 — Aug 2020

Intern / Software Developer | HCL Notes · LotusScript · Vue.js · Chart.js

At MedWeb, my first full-time role, I started as an intern and later became a Software Developer. I worked on advanced scheduling software focused on the medical field, primarily used by hospitals.

Within this role I worked with HCL Notes, which is a document-oriented database, using LotusScript as the backend language and Vue.js as the frontend language, along with Chart.js to create various data dashboards for scheduling insights.

I was responsible for the technical development of this platform and how it was implemented, transforming large datasets from HCL Notes into clear, readable graphs.
